

Sub A1&gt;

ABSTRACT OF THE DISCLOSURE

A bolt and nut can be smoothly engaged with a mating nut and a mating bolt, respectively, even if the threads of the mating nut and the mating bolt have metal particles or paint particles sticking thereto. The bolt has a regularly threaded part (3) capable of being regularly engaged with the mating nut, and a cylindrical guide part (4) extending from the regularly threaded part and having a diameter smaller than the minor diameter of the internal thread of the mating nut. A slot (5) is formed in the end surface of the cylindrical guide part.
